

Department of Sports & Exercise Medicine

Our team of specialists provide comprehensive services for the diagnosis, treatment and management of various types of musculoskeletal conditions (e.g. injuries and pain affecting your muscles, bones, tendons and joints) and sports injuries. Supported by the latest diagnostic equipment and rehabilitation programmes, we help our patients to return to their exercise and sporting activities so that they can achieve their health and fitness goals.

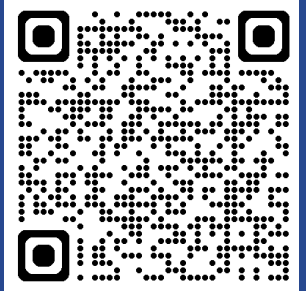

Our Services

At our clinic, we believe every athlete and active individual deserves personalised care tailored to their specific needs. We provide a comprehensive range of services to support recovery, optimise performance and prevent injury:

- 1) Injury Management
- 2) Extracorporeal Shock Wave Therapy (ESWT)
- 3) Ultrasound-Guided Injection
- 4) Hyaluronic Acid Injection
- 5) Platelet-Rich Plasma (PRP) Therapy
- 6) Sports & Fitness Screening
- 7) Exercise prescription and rehabilitation programmes

Sports & Fitness Screening

Prevent injuries and optimise your performance with our comprehensive sports screening. This screening is suitable for individuals of all fitness levels — whether you are new to exercise, returning after an injury, or training competitively.

What's Included?

- Detailed musculoskeletal assessment
- Functional movement screening
- Personalised exercise and dietary recommendations
- Injury risk assessment

Benefits

- Early detection of potential problems
- Personalised exercise prescription to ensure a safe and gradual progression of physical activity levels
- Performance optimisation advice

Preparation

- Wear comfortable attire
- Bring regular training shoes
- Allow 60-90 minutes for the assessment

Sports Screening & Fitness Packages

Choose from our range of screening packages, designed to support your individual needs and performance goals.
